PROFILE

I am a software engineer with a passion for full-stack web application development who has dedicated himself to consistent and effective self-learning in both the technical aspects of his profession, and soft skills such as critical thinking, interpersonal skills, and time management. I cannot wait to meet my new team and get to work!

EXPERIENCE

SOFTWARE DEVELOPER, COMPOSITIONAL IT LTD. — LONDON, UK — 2019-2021

My Role: As a software developer at Compositional IT, I have collaborated directly with both the more senior members of the team in a tight-knit agile environment, and the software departments of world-class corporations such as Colliers, to provide software solutions to day-to-day problems in both legacy and greenfield projects.

During this time, I had the chance to familiarise myself with the entire lifecycle of full-stack web applications all the way from the planning phase to deployment and continuous integration cycles.

Tech Stack: .NET Framework/.NET Core (Saturn, Fable, Elmish, MVC, WebAPI), Microsoft SQL Server 2016–2017, Microsoft Azure (DevOps, App Service, Storage, Active Directory).

PORTFOLIO

You can find each project I have developed as a part of my portfolio, as well as blog posts I have written on a number of technical topics, on my personal website at www.alicandev.com. For your convenience, below is a list of those projects.

GOTEAM! — KANBAN BOARDS

Description: A Django-REST application with a React.js frontend, which is a fictitious kanban board app for small teams that allows admins to assign tasks to members, and gives members edit rights to only the tasks that they are assigned to.

Live Demo: https://www.goteam.online

GitHub Repo: https://www.github.com/alicandev/portfolio_goteam

BLAZIN PIZZA CO — ONLINE PIZZA STORE

Description: A full-stack JavaScript application (MERN Stack) that I have built in an effort to put all my JavaScript knowledge into a single coherent project. It simulates the workflow of a pizza store app where both guests and members can order online.

Live Demo: https://www.blazinpizza.co

GitHub Repo: https://www.github.com/alicandev/portfolio_blazin-pizza-co

GITHUB FINDER – USER AND CONTENT SEARCH

Description: A React application that incorporates two different APIs (GitHub Search and OpenStreetMap) to allow its users to search through GitHub profiles and view their repos, gists, followers, following, and location as well as the content thereof.

Live Demo: https://www.githubfinder.icu

GitHub Repo: https://www.github.com/alicandev/portfolio_github-finder

LANDING PAGE – ONLINE PORTFOLIO

Description: The landing page of my online portfolio itself is a React application! Even though it fundamentally is a static website, I have chosen this approach to give myself even more of an exposure to React, since React is my "go-to" when it comes to frontend development.

Live Demo: https://www.alicandev.com

GitHub Repo: https://www.github.com/alicandev/portfolio_landing-page

EDUCATION

I am completely self-taught. However, I am a persistent self-learner and I am committed to self-improvement as much as I am passionate about programming. You can view the LinkedIn courses that I have finished on my profile, which make up a considerable minority of my programming-related learning, the majority being comprised of in-depth hands-on/docs learning and book reading.

SKILLS

Programming Languages: Python, JavaScript/TypeScript, C#, F#, HTML, CSS, and Sass.

Frameworks and Libraries: Django (Django-REST), React/Redux, Node.js (Express), and ASP.NET (MVC, WebAPI, Saturn, Elmish, Fable).

Database Administration: PostgreSQL, MongoDB, Microsoft SQL Server, and SQLite.

Cloud Platforms: Microsoft Azure (DevOps, App Service, Storage, Active Directory), Amazon Web Services*, and Google Cloud Platform*.

Limited capability, but a keen interest to explore.
